

Base System

[AV400 Vein Viewing System](#)

The AccuVein AV400 digitally displays a map of the vasculature on the surface of the skin in real time, allowing clinicians to verify vein patency and avoid valves or bifurcations. It is handheld and lightweight, weighing only 9.7 ounces (275g), and easily converts to hands-free with the use of optional wheeled or fixed stands.

Hands-Free Solutions

When you want both hands available to insert a needle, consider these hands-free options.

Wheeled Hands-Free

For the medical professional in a hospital, doctor's office or blood donation center, this hands-free stand with an adjustable pole can be wheeled over to the bedside or chair. Just place the AccuVein device into the hands-free accessory and your hands are free to perform the venipuncture procedure!

Part Number HF350, Order as HF41A plus HF35B

Hands-Free Solution

For the caregiver who doesn't stay in one place, this portable hands-free solution consists of a pole clamp and a flexible arm. When not in use, the device folds so it can easily be carried.

This configuration comes with the clamp (below) that can attach to poles such as a rounded bedrail or an IV pole and flat surfaces. Just attach it and you're hands are free to perform the procedure.

Part Number HF410
