In a Whole New Light

Stryker Visum 300[®]

Examination Light

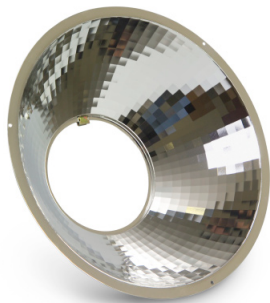

The Visum 300 Exam Light provides up to 37,500 lux of illuminating intensity with a color temperature of 4,000 degrees Kelvin. The result is that it delivers pure white light to the examination field without sacrificing color accuracy.

The hood is made out of a heat absorbing aluminum alloy, which allows for minimal heat to be cast into the examination field. Designed with a unique, multifaceted reflector, the Visum 300 also offers superior shadow resolution.

With both ceiling mounted and floor stand versions, the Visum 300 delivers an ideal lighting solution for examinations performed in the emergency department, critical care unit, and labor & delivery.

Features:

- **Excellent maneuverability results from 360 degrees of motion at three joints on the suspension**
- **With 90° of vertical articulation, the Visum 300 offers excellent range & flexibility**
- **The bulb is easily accessed, and may be changed without the use of tools**
- **The ergonomic, centrally located handle makes moving the light easy**
- **Built upon a portable stand with locking casters, the Visum 300 FS is easily moved or locked into place**

The unique reflector design ensures precise lighting for a consistent field and minimal shadowing.

Stryker offers one of the very few exam lights on the market with a sterilizable handle.
